PROFESSIONAL SUMMARY

Fresh Informatics Technology graduate with a 3.90/4.00 GPA and hands-on experience building full-stack web systems from responsive interfaces to APIs and relational databases. Delivered applications with Next.js, TypeScript, React, Laravel, PHP, Go/Fiber, PostgreSQL, and MySQL/MariaDB, including JWT authentication, role-based access, QR-enabled workflows, reporting, PDF generation, API documentation, and Docker-based development. Applies typed architecture, testing, accessibility, and SEO practices to produce maintainable, user-focused software.

PROJECT EXPERIENCE

Full Stack Developer - UniSpace Campus Reservation System 2025 - 2026

Next.js 16, TypeScript, Go, Fiber, PostgreSQL, JWT, Docker Compose, Swagger/OpenAPI

- Designed and built a monorepo-based campus facility reservation platform that digitizes room availability, booking requests, administrative approval, attendance verification, and reporting.
- Implemented 37 REST API endpoints across authentication, booking, facility, profile, user, and dashboard modules using handler, service, and repository layers in Go/Fiber.
- Modelled a five-table PostgreSQL schema and secured user and administrator workflows with JWT authentication, OTP verification, protected route groups, and role-based authorization.
- Built QR ticket generation and browser-based check-in/check-out scanning, plus a background worker that closes stale bookings to keep occupancy and attendance records consistent.
- Documented the API with Swagger and containerized PostgreSQL setup with an initialization script and health check for reproducible development environments.

Full Stack Developer - Sistem Rapor 2026

Laravel 12, PHP 8.2, Blade, Tailwind CSS, MySQL/MariaDB, Laravel Breeze, DomPDF

- Built a server-rendered academic reporting system that manages classes, students, teachers, subjects, grades, statistics, and report cards through role-specific workflows.
- Modelled six domain entities with Eloquent relationships, migrations, and seeders to support repeatable database setup and consistent academic records.
- Enforced separate administrator and teacher access through Laravel Breeze authentication and custom role middleware, with public registration disabled to protect grade-management functions.
- Implemented resource controllers and Blade interfaces for master-data management and grade entry, then generated browser-viewable and downloadable PDF report cards from the same stored records using DomPDF.

Developer - Full Stack Portfolio Redesign 2026

Next.js 16, React 19, TypeScript, Tailwind CSS, Vitest, Testing Library, Vercel

- Rebuilt a Create React App portfolio as a static-first Next.js App Router site with strict TypeScript and one typed content source shared across project, work, and about routes.
- Added responsive and accessible UI states, static case-study generation, route metadata, JSON-LD, Open Graph, sitemap, robots handling, optimized images, and tests for navigation, content, SEO, and link contracts.

Researcher - Player Clustering with K-Means 2025 - 2026

Python, Jupyter, scikit-learn, K-Means, Data Analysis

- Prepared survey-style data, evaluated cluster counts, and interpreted player segments by game-feature preference and business model in a reproducible undergraduate thesis notebook.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript ES6+, React, Next.js, TypeScript, Tailwind CSS, Blade, Vite, responsive UI, accessibility
Backend: Go, Fiber, PHP, Laravel, REST API development, JWT authentication, OTP workflows, RBAC, Laravel Breeze
Data: PostgreSQL, MySQL/MariaDB, SQL, relational data modelling, migrations, seeders, Python, Jupyter, scikit-learn, TensorFlow, Keras
Engineering: Git, GitHub, Docker Compose, Swagger/OpenAPI, Vitest, Testing Library, PHPUnit, ESLint, Vercel deployment

EDUCATION

Universitas Nahdlatul Ulama Lampung (UNU Lampung) GPA: 3.90 / 4.00
Informatics Technology - Fresh Graduate
